Assignment 07– Classes and Objects

Introduction

This document outlines the steps I took to complete Assignment 07 in the IT FDN 110 A. In this assignment, I was asked to iterate an earlier program to classes in my code.

Steps Taken

To complete this assignment, I took the following steps:

1. I loaded the Assignment07-Starter file provided for the class.
2. Borrowing extensively from my Mod 07, Lab 3 Code, I then created the person and it's inheriting class: student. This was relatively straightforward as we had done it extensively in the labs.
3. When I ran my code I encountered an error, I had not created the Enrollments.json file. I corrected this by adding a handler to the read_data_from_file method of the FileProcessor and told it what to do if the file could not be found: create an empty list and ignore the close command.

Summary

This document uses plain English to outline the steps I took to complete Assignment 07 for this class as well as the issues I encountered in doing so.
